

Appendix C

Introduction to Economic Impact Assessment

Appendix C provides tables of the economic impacts associated with all the options considered for alleviating the problems confronting the industry. Seven basic options were considered: (1) a permit/license moratorium, which also includes open access; (2) a government-sponsored buyback program; (3) an ex-vessel price support program; (4) a marketing program financed by a tax on ex-vessel revenues; (5) creation of a cooperative to increase profitability; (6) a fractional license program; and (7) an operating loan with a required payback. Two baselines or reference analyses were also considered. These baselines considered what might happen to landings and economic activity if nothing is done to address the problems.

Because of considerable uncertainty about price levels, the baseline analyses, as well as the other analyses, consider two possible pricing scenarios. In one case, it is assumed that future prices will track the ex-vessel prices observed in 2002; in the other case, it is assumed that future prices will track the ex-vessel prices observed in 2000. In addition, the analyses consider several options relative to buybacks and moratoriums; these are explained in the title of each table. In general, buybacks and moratoriums are considered in terms of large vessels or small and large vessels. For the option of no moratorium, it is clearly stated in the title to the appropriate table.

All dollar values are presented in terms of thousands of year 2003 constant dollar values. Deflation or conversion to constant dollar values was accomplished by dividing the dollar value (e.g., ex-vessel revenues, sales, and income) by the gross national product implicit price deflator, with the deflator equal to 1.00 in 2003. Employment numbers are presented in terms of full-time equivalent units of employees (e.g., two individuals working six months a year equates to one full-time employee).

Baseline 2000

Table C1. Economic Impacts Associated with Baseline (No Policies to Address Issues) and Year 2000 Ex-vessel Prices^a

Year	Ex-vessel Revenue 2003 Constant Dollar Value	Harvesting Sector			Processing Sector			Total
